Introduction

Developing cooperation projects for localities with scarce resources is a complex task, since it is necessary to carry out a series of preliminary tasks, as well as to evaluate the results of the project. Knowing the characteristics of the place, its main needs and the resources it has is essential to know under what circumstances to work. With this program, TECH aims to train medical professionals in this field, so that they can participate in projects that improve the living conditions of other people and promote projects in line with the SDGs set out in the 2030 Agenda.

“

If you want to work in the field of International Cooperation, do not think twice and specialize with TECH in Project Management, Design and Assessment, it is the best way to prepare you for success"

International cooperation for development is developed in a multitude of sectors, with the aim of improving the living conditions of the populations most in need. Their work around the world requires specialized knowledge, as the needs are not the same in all communities. At this point, a great deal of preliminary work is required before intervening in a region with a specific project.

In this context of cooperation, project management is essential, as well as project design and assessment, because only a thorough work will allow the feasibility of the project to be known, so that it can be implemented. And its assessment is essential to assess its effectiveness and, if necessary, to be able to include it in another area.

This program combines basic knowledge in international development cooperation applied to the field of medicine, tools that allow the development worker to seek to improve the performance of their work in those areas that people and communities demand, guide them to change and focus them on the present situation through the tools and resources of cooperation.

In addition, as it is a 100% online program, the physician will be able to combine the study of this very complete Postgraduate Diploma with the rest of their daily obligations, choosing at all times where and when to study. A high level qualification that will take the medical professional to the highest level in their field of practice.

International Guest Director

Piotr Sasin is an international expert with experience in non-profit management, specializing in humanitarian assistance, resilience and international cooperation for the development of peoples. Indeed, he has worked in complex and challenging environments, helping communities affected by conflict, displacement and humanitarian crises. In addition, his focus on social innovations and participatory planning has allowed him to implement long-term solutions in vulnerable areas, significantly improving living conditions.

He has also held key roles as Director of Refugee Crisis Response at CARE, where he has led humanitarian initiatives to support displaced people in various regions. He has also worked as Country Director at People in Need, where he was responsible for coordinating community development and rapid emergency response programs. In turn, his role as Country Representative at the Terre des Hommes Foundation has allowed him to manage projects focused on child protection.

Consequently, at the international level, he has been recognized for his ability to manage large-scale projects in the field of international development cooperation, collaborating with governments, NGOs and multilateral agencies in various regions. Likewise, his leadership has been instrumental in promoting resilience in communities affected by disasters, fostering local empowerment through urban planning and sustainable development. In this way, he has been praised for his focus on conflict mitigation and his ability to build strategic partnerships.

Ultimately, Piotr Sasin has a strong academic background, with a Master's degree in Urban Planning and Regional Development, as well as a Bachelor's degree in Ethnology and Anthropological Culture, both degrees from the University of Warsaw in Poland. Thereby, his research has focused on international cooperation and sustainable planning in humanitarian crisis contexts.

You will deepen in fundamental knowledge for the design of international development cooperation projects in different geographical areas, boosting your career to the top"

05 Methodology

This academic program offers students a different way of learning. Our methodology uses a cyclical learning approach: **Relearning**.

This teaching system is used, for example, in the most prestigious medical schools in the world, and major publications such as the **New England Journal of Medicine** have considered it to be one of the most effective.

“

Discover Relearning, a system that abandons conventional linear learning, to take you through cyclical teaching systems: a way of learning that has proven to be extremely effective, especially in subjects that require memorization"

At TECH we use the Case Method

What should a professional do in a given situation? Throughout the program, students will face multiple simulated clinical cases, based on real patients, in which they will have to do research, establish hypotheses, and ultimately resolve the situation. There is an abundance of scientific evidence on the effectiveness of the method. Specialists learn better, faster, and more sustainably over time.

With TECH you will experience a way of learning that is shaking the foundations of traditional universities around the world.

According to Dr. Gervas, the clinical case is the annotated presentation of a patient, or group of patients, which becomes a "case", an example or model that illustrates some peculiar clinical component, either because of its teaching power or because of its uniqueness or rarity. It is essential that the case is based on current professional life, trying to recreate the real conditions in the physician's professional practice.

“

Did you know that this method was developed in 1912, at Harvard, for law students? The case method consisted of presenting students with real-life, complex situations for them to make decisions and justify their decisions on how to solve them. In 1924, Harvard adopted it as a standard teaching method”

The effectiveness of the method is justified by four fundamental achievements:

1. Students who follow this method not only achieve the assimilation of concepts, but also a development of their mental capacity, through exercises that evaluate real situations and the application of knowledge.
2. Learning is solidly translated into practical skills that allow the student to better integrate into the real world.
3. Ideas and concepts are understood more efficiently, given that the example situations are based on real-life.
4. Students like to feel that the effort they put into their studies is worthwhile. This then translates into a greater interest in learning and more time dedicated to working on the course.

Relearning Methodology

At TECH we enhance the case method with the best 100% online teaching methodology available: Relearning.

This university is the first in the world to combine the study of clinical cases with a 100% online learning system based on repetition, combining a minimum of 8 different elements in each lesson, a real revolution with respect to the mere study and analysis of cases.

Professionals will learn through real cases and by resolving complex situations in simulated learning environments. These simulations are developed using state-of-the-art software to facilitate immersive learning.

At the forefront of world teaching, the Relearning method has managed to improve the overall satisfaction levels of professionals who complete their studies, with respect to the quality indicators of the best online university (Columbia University).

With this methodology, more than 250,000 physicians have been trained with unprecedented success in all clinical specialties regardless of surgical load. Our pedagogical methodology is developed in a highly competitive environment, with a university student body with a strong socioeconomic profile and an average age of 43.5 years old.

Relearning will allow you to learn with less effort and better performance, involving you more in your specialization, developing a critical mindset, defending arguments, and contrasting opinions: a direct equation to success.

In our program, learning is not a linear process, but rather a spiral (learn, unlearn, forget, and re-learn). Therefore, we combine each of these elements concentrically.

The overall score obtained by TECH's learning system is 8.01, according to the highest international standards.

This program offers the best educational material, prepared with professionals in mind:

Study Material

All teaching material is produced by the specialists who teach the course, specifically for the course, so that the teaching content is highly specific and precise.

These contents are then applied to the audiovisual format, to create the TECH online working method. All this, with the latest techniques that offer high quality pieces in each and every one of the materials that are made available to the student.

Surgical Techniques and Procedures on Video

TECH introduces students to the latest techniques, the latest educational advances and to the forefront of current medical techniques. All of this in direct contact with students and explained in detail so as to aid their assimilation and understanding. And best of all, you can watch the videos as many times as you like.

Interactive Summaries

The TECH team presents the contents attractively and dynamically in multimedia lessons that include audio, videos, images, diagrams, and concept maps in order to reinforce knowledge.

This exclusive educational system for presenting multimedia content was awarded by Microsoft as a "European Success Story".

Additional Reading

Recent articles, consensus documents and international guidelines, among others. In TECH's virtual library, students will have access to everything they need to complete their course.

06 Certificate

This Postgraduate Diploma in Management, Design and Assessment of International Development Cooperation Projects guarantees students, in addition to the most rigorous and up to date education, access to a Postgraduate Diploma issued by TECH Global University.

“

Successfully complete this program and receive your university qualification without having to travel or fill out laborious paperwork”

This private qualification will allow you to obtain a **Postgraduate Diploma in Management, Design and Assessment of International Development Cooperation Projects** endorsed by **TECH Global University**, the world's largest online university.

TECH Global University is an official European University publicly recognized by the Government of Andorra ([official bulletin](#)). Andorra is part of the European Higher Education Area (EHEA) since 2003. The EHEA is an initiative promoted by the European Union that aims to organize the international training framework and harmonize the higher education systems of the member countries of this space. The project promotes common values, the implementation of collaborative tools and strengthening its quality assurance mechanisms to enhance collaboration and mobility among students, researchers and academics.

This **TECH Global University** private qualification is a European program of continuing education and professional updating that guarantees the acquisition of competencies in its area of knowledge, providing a high curricular value to the student who completes the program.
